OF THE REPUBLIC OF KAZAKHSTAN
RSE «KAZHYDROMET»**

RESEARCH CENTER

**OVERVIEW OF UP SURGE AND DOWN SURGE EVENTS
in July 2025**

Peshnoy

Date	Level rise, cm	Level fall, cm	Prevailing wind direction, rhumb	Maximum wind speed, m/s
05-06.07	16		SW	6
07-08.07		17	NW	4
21.07	15		E	16

- On 5-6 July, a sea level rise by 16 cm was observed from minus 28.68 m BS to minus 28.52 m BS. The wind speed reached 6 m/s, predominantly from the northwest directions;

Figure. Graph of sea level changes in Peshnoy on July 5-6, 2025.

- On 7-8 July, a sea level fall by 17 cm was observed from minus 28.56 m BS to minus 28.73 m BS. The wind speed reached 4 m/s, predominantly from the northwest;

Figure. Graph of sea level changes in Peshnoy on July 7-8, 2025.

- On 21 July, a sea level rise by 15 cm was observed from minus 28.82 m BS to minus 28.67 m BS. The wind speed reached 16 m/s, predominantly from the east directions;

Figure. Graph of sea level changes in Peshnoy on July 21, 2025.

Kulaly, island

The runup and surge level fluctuations did not exceed 11 cm. The sea level change during the month varied from minus 29.46 m BS to minus 29.35 m BS.

Fort-Shevchenko

The runup and surge phenomena were not recorded. The sea level change during the month fluctuated from minus 29.52 m BS to minus 29.32 m BS.

Saura

The runup and surge phenomena were not recorded. The sea level change during the month fluctuated from minus 29.50 m BS to minus 29.32 m BS.

Peschany

The runup and surge level fluctuations did not exceed 5 cm. The sea level change during the month varied from minus 29.54 m BS to minus 29.49 m BS.

Aktau

The runup and surge level fluctuations did not exceed 13 cm. The sea level change during the month varied from minus 29.52 m BS to minus 29.39 m BS.

Fetisovo

Date	Level rise, cm	Level fall, cm	Prevailing wind direction, rhumb	Maximum wind speed, m/s
12-13.07		15	W, NE	4

- On 12-13 July, a sea level fall by 15 cm was observed from minus 29.23 m BS to minus 29.38 m BS. The wind speed reached 4 m/s, predominantly from the west, northeast;

Figure. Graph of sea level changes in Fetisovo on July 12-13, 2025.

Note:

Analysis of the Zhanbay upsurge and downsurge events was not performed due to the receipt of hydrometeorological data with gaps.

STORM SURGE HAZARD CRITERIA FOR THE NORTHEASTERN COASTLINE

	Rise/Fall, cm	Characteristic***	Consequences
Up surge	50	Critical	Flooded coast area to 5 km
	65	Danger	Flooding and flooding of dams and buildings up to 10 km
	110	Especially danger	Flooding of the coast for more than 10 km, destruction of dams and buildings
Down surge	-50	Critical	worsening navigation conditions for small ships
	-65	Danger	Worsening of navigation conditions for small and medium-sized ships
	-100	Especially danger	Ships would be aground

** The calculated characteristics were obtained using the hydrodynamic module of the MIKE 21 Flow Model, adapted in RSE "Kazhydromet" to the conditions of the Caspian Sea. Data of sea level measurements and pressure field numerical forecasting for 24 –120 hours were used in computation.*

*** At definition of characteristic marks local conditions were considered.*

**** Critical – 50 % frequency, danger – 25 % frequency, especially danger– 2 % frequency. The calculation was carried out for the period 1940-2020 according to the data of Peshnoy station.*

BS – Baltic System

The bulletin was compiled by the Department of Hydrometeorological Research of the Caspian Sea
